

Get the most value from your electric vehicles with WEBFLEET

The highest level of EV management

WEBFLEET Electric Vehicle Management

Get everything you need to efficiently control and organise your whole fleet, with internal combustion engine, hybrid and electric vehicles all on the same interface.

WEBFLEET helps you:

- Stay connected to your electric fleet
- Monitor your whole fleet in one view
- Plan your jobs based on vehicle battery levels
- See real-time charging information

REAL-TIME BATTERY LEVEL

Always know how far your EVs can go with battery levels and remaining driving ranges.

EV MAP SUPPORT

With charging stations displayed on your WEBFLEET map, you can plan schedules confident in the knowledge that your EV will get enough charge to complete the trip.

FIND CHARGING LOCATIONS ON THE ROAD

Your drivers get TomTom's EV map coverage on their PRO Driver Terminal with charging points in over 50 countries throughout Europe, the Americas, the Middle East and Asia.

ACCURATE EV CHARGING INFORMATION

Stay connected with complete visibility of your EV's charging status and remaining charging time, in real-time and historically.

IMPORTANT STATUS UPDATES

Get notified in real-time when the battery of an EV on the road reaches a critical level and needs to be charged.

TAILORED TO YOUR NEEDS

WEBFLEET can be integrated with a wide range of 3rd party applications, so you can build the ideal solution for your EV fleet.

Want to find out more about what WEBFLEET Electric Vehicle Management can do for you? Speak to one of our experts today.

Let's drive business. Further.
