

A man with curly hair is seen from the side, looking at two computer monitors. The left monitor displays a complex scheduling interface with a grid of tasks, each represented by a colored bar with a checkmark. The right monitor shows a list of tasks with columns for 'Planned arrival', 'Estimated arrival', 'Estimated departure', and 'Destination'. Below this is a 'SCHEDULE SUMMARY' section with a table showing 'Planned arrival', 'Estimated arrival', 'Estimated departure', and 'Destination'. The man is wearing a dark blue shirt and is sitting at a desk with a smartphone and two pens (one orange, one red) in front of him.

Webfleet Workflow Management

Streamline operations, empower drivers and get more jobs done

Introduction

You're facing complex operations every day: maintaining productivity despite driver shortages, adapting routes last minute to avoid delays, juggling manual processes and rising costs, and making decisions based on limited jobs visibility and performance data.

Our workflow management solutions help you digitise your operations, streamline scheduling, empower drivers and get more jobs done. Built to scale with your business, our solutions adapt to your needs whether you're a growing SME providing urban services, a construction company managing on-site operations or a large enterprise focused on long-haul transportation.

Plan smarter and faster

Quickly assign and schedule jobs with full fleet visibility in Webfleet or via TMS integration

Boost efficiency operation

Maximise fleet use and optimise trips in Webfleet or import optimized tours and routes from 3rd party provider.

Analyse and improve

Track performance and take action to improve with insights tailored to your fleet.

Execute effectively

Empower drivers with easy-to-use tools and stay connected to your field ops in real time.

Workflow management portfolio

One tariff for all your planning, optimising, monitoring and execution needs

1 Plan and Optimise

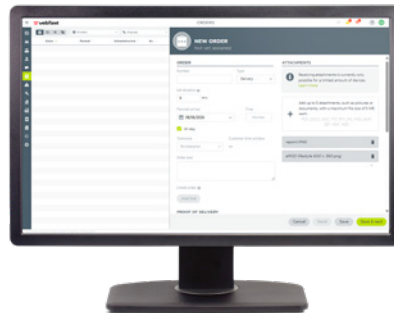

Fleet scheduler

Create or import activities. Quickly assign jobs by dragging and dropping, track progress in real time with colour-coded statuses and create and manage all jobs in one place. Save time, cut costs and keep planning fully under control.

Jobs attachments

Attach up to five files per order and share them with drivers in seconds, cutting paperwork and accelerating updates. Drivers can also upload documents from the field, keeping a clear record of all job details in Work App.

Route Optimisation

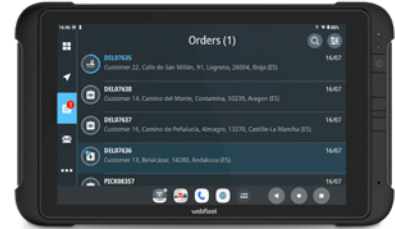

For each individual vehicle, optimise order schedules. Easily optimise order schedules by using the fastest routes between destinations.

2 Execute

Driver workflow

Make execution easier with everything in one place. Drivers access a hub with scheduled jobs, attachments, ePOD, notifications, embedded chat with built-in translation. Working time, remaining driving time and tachograph status are also displayed to facilitate compliance.

TomTom Professional Navigation

Route planner with live traffic and alerts based on vehicle size and type. Drivers receive in-cabin feedback to improve driving behavior and alerts for low tire pressure.

3 Communicate

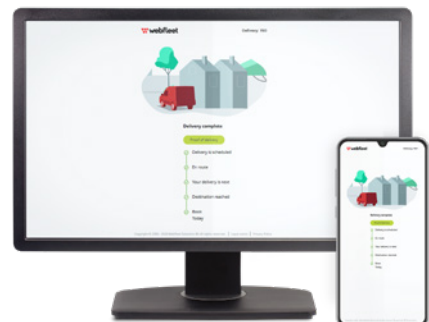

Chat module and built-in translation

Connect with your drivers with our chat function. Built in translation allows for easy messaging between dispatchers and drivers in their native languages.

Order status sharing

Enhance transparency and customer experience with live order updates. Automatically share statuses via email or URL to notify customers of delivery progress and track all orders with unique IDs.

4 Monitor

Dashboard

Track on-time delivery (OTD) and completed orders live with dedicated dashboard tiles. Monitor driver behaviour and get insights from our AI-powered Fleet Advisor to help save fuel expenses.

Route deviation.

Monitor planned routes in real time with instant deviation alerts — no need for manual checks. Boost visibility, reduce exposure to theft and cut detour-related expenses.

Electronic Proof of Delivery (ePOD)

Boost driver productivity and streamline delivery by enabling drivers to record and link signatures, photos and notes to planned jobs. Get notified of new attachments in real time.

5 Connect

Webfleet.connect

Import all the data you need in your Transport Management System (TMS) via Webfleet.connect, our API integration. Receive content description, container type, weight, quantity, ePOD and more from our endpoints.

Integrate now.

What you need

BIZ tariff + LINK device

Work App
